

NCERT Q-12.13.2.29

Ajay Jakhar

Question:- Two biased dice are thrown together. For the first die $P(6) = 1/2$ the other scores being equally likely while for the second die, $P(1) = 2/5$ and the other scores are equally likely. Find the probability distribution of 'the number of ones seen'.

Solution:

For die 1 :-

$$P(6) = \frac{1}{2} \quad (1)$$

$$P(6)' = 1 - P(6) = \frac{1}{2} \quad (2)$$

$$P(1) = \left(\frac{1}{5}\right) \cdot \left(1 - \frac{1}{2}\right) = \frac{1}{10} \quad (3)$$

$$(4)$$

For die 2 :-

$$P(1) = \frac{2}{5} \quad (5)$$

$$P(1)' = 1 - P(1) = \frac{3}{5} \quad (6)$$

Let $P_i(1)$ denotes probability of getting i times 1.

$$P_0(1) = \left(1 - \frac{1}{10}\right) \cdot \left(\frac{3}{5}\right) = \frac{27}{50} \quad (7)$$

$$P_1(1) = \left(1 - \frac{1}{10}\right) \cdot \left(\frac{2}{5}\right) + \left(\frac{1}{10}\right) \cdot \left(\frac{3}{5}\right) = \frac{21}{50} \quad (8)$$

$$P_2(1) = \left(\frac{1}{10}\right) \cdot \left(\frac{2}{5}\right) = \frac{2}{50} \quad (9)$$

$$(10)$$

i	0	1	2
$P_i(1)$	27/50	21/50	2/50
